Aachen, October 2022 – For the 31st time now, the “Aachen Colloquium Sustainable Mobility” (ACK) will take place from October 10-12 as the industry meeting place for experts from the automotive industry to exchange ideas on the latest developments for the mobility of the future. FEV, a leading international independent service provider in vehicle and powertrain development for hardware and software, will be presenting developments for CO₂-neutral mobility this year. Furthermore, the company's software and energy solutions will be showcased, which have a high social impact due to its focus on sustainability.

“FEV is a pioneer in sustainable development solutions, and that's exactly what our booth at ACK reflects,” said Prof. Stefan Pischinger, President and CEO of FEV Group. “Our offerings range from eScooters for shorter urban distances to sky cabs connecting people quickly and efficiently in metropolitan regions. In addition, we develop the software for intelligent, autonomously driving vehicles and use our expertise for smart energy systems, for example.”

What FEV's development achievements have in common is that they are sustainable, guarantee added comfort and safety for users, and also take future societal requirements into account.

This year's FEV booth concept covers a total of seven thematic areas. In the battery development area, different battery technologies will be presented and FEV's 360-degree approach in this context will be explained. It includes benchmarking as well as solutions to evaluate concept ideas for battery design on the customer side within the shortest possible time and to verify fundamental concept decisions. Another important component is

the virtual tour of FEV's eDLP – the world's largest independent test and development center for high-voltage batteries.

For electric drives, efficient developments will be presented that are used in heavy-duty applications, for example. Furthermore, on display at the booth are innovative solutions specifically for urban mobility on land or – for medium distances – even in the air. In addition, promising options for meeting the challenges of future energy systems will be presented.

FEV also offers a wide range of services in the field of hydrogen technologies. These include optimized fuel cell applications, hydrogen ICE (internal combustion engine) solutions ready for series production, and test rigs for hydrogen applications.

FEV.io also presents a further development field in the area of software with the Software Defined Vehicle (SDV) demonstrator. This addresses special requirements, such as wireless connectivity and cloud-based computing power. In addition, colloquium visitors to the FEV booth will be informed about solutions in the context of autonomous driving. To safeguard automated driving functions in the face of ever-increasing system complexity, the company offers unique systems that detect and evaluate the wide range of scenarios in road traffic during test drives and prepare them for developers. This saves time and development costs.

Colloquium visitors can personally examine these and other FEV highlights from October 10-12 on the ground floor of the Eurogress Aachen at booth 04. In addition, this year's ACK will once again offer a top-class lecture program, in which FEV will also participate.

About FEV

FEV has always pushed the limits.

FEV is an internationally recognized leader of innovation across different sectors and industries. Professor Franz Pischinger laid the foundations by combining his background in academia and engineering with a great vision for continual progress. The company has supplied solutions and strategy consulting to the world's largest automotive OEMs and has supported customers through the entire transportation and mobility ecosystem.

As the world continues to evolve, so does FEV.

That's why FEV is unleashing its technological and strategic expertise into other areas. It applies its forward thinking to the energy sector. And its software and system know-how will enable the company to lead the way making intelligent solutions available to everyone. FEV brings together the brightest minds from different backgrounds and specialties to find new solutions for both current and future challenges.

But FEV won't stop there.

Looking ahead, FEV continues to push the limits of innovation. With its highly qualified 7,000 employees at more than 40 locations globally, FEV imagines solutions that don't just meet today's needs but tomorrow's. Ultimately, FEV keeps evolving – to a better, cleaner future built on sustainable mobility, energy and software that drives everything. For the companies' partners, its people and the world.
